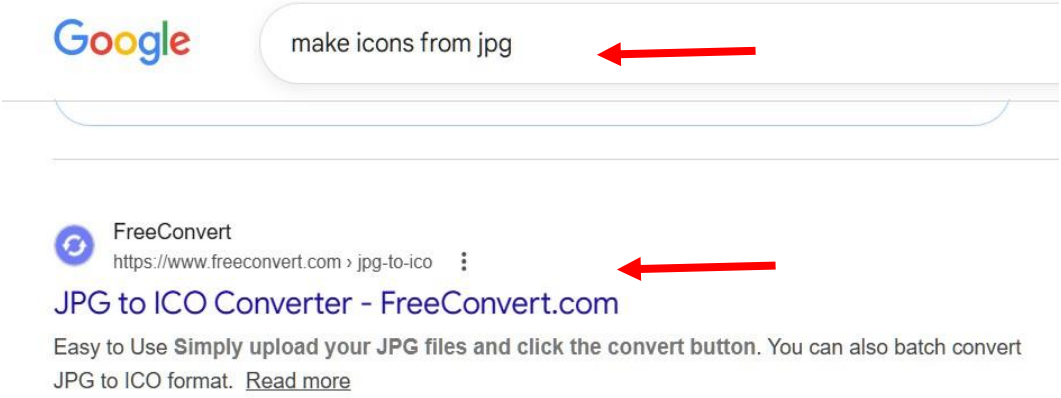
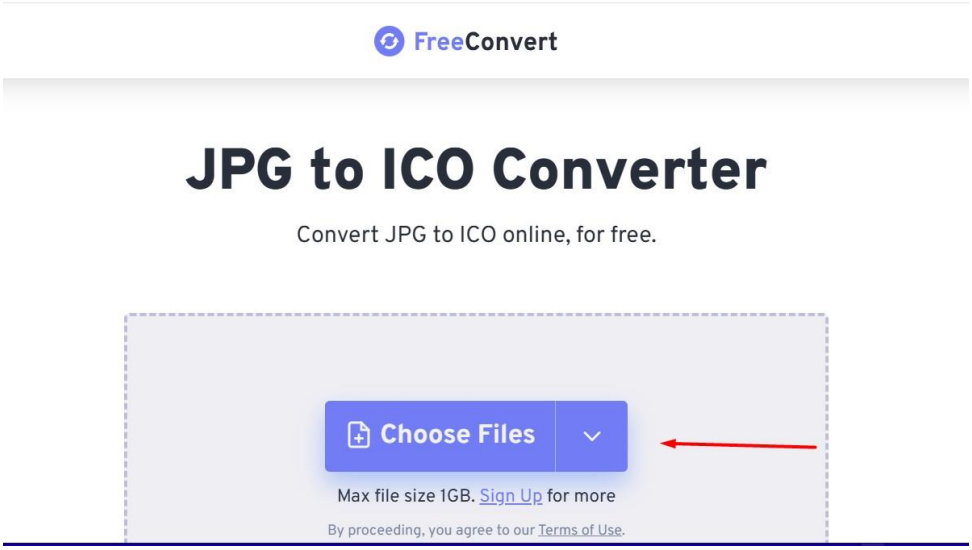
Making icons

Type “make icons from Jpg” into google and look for this result.

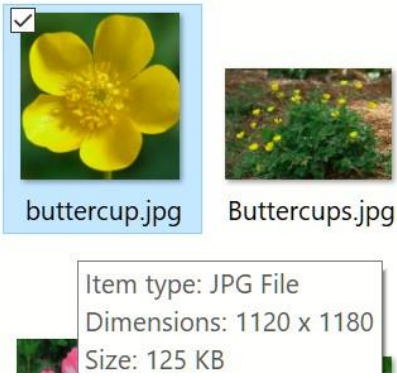


Click on it and when it opens click on Choose files.



Note: I put a link to this program on my computer so I could always access it. I will show you how to do this.

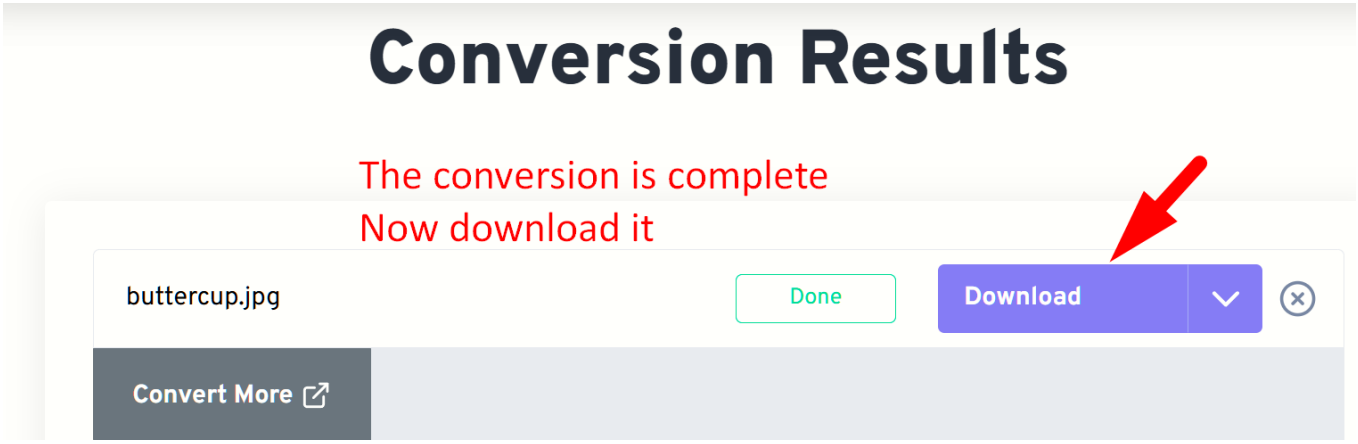
Browse to a folder where you have a suitable picture. For example I went to my **Garden flowers** and chose one and then clicked “**Open”**.



Note the dimensions are **almost similar** for the icon will be square or the icon will be distorted on conversion.

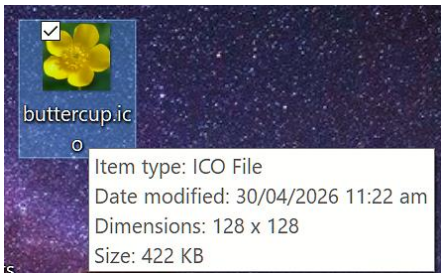
The conversion started

When it was done I clicked “**Download**” and it went into my download folder.



Here it is in my Download folder

I will transfer it to my desktop to see it.



Now I can use it to put on a folder.
