Change your Taskbar colours. Windows 10 and Windows 11 video

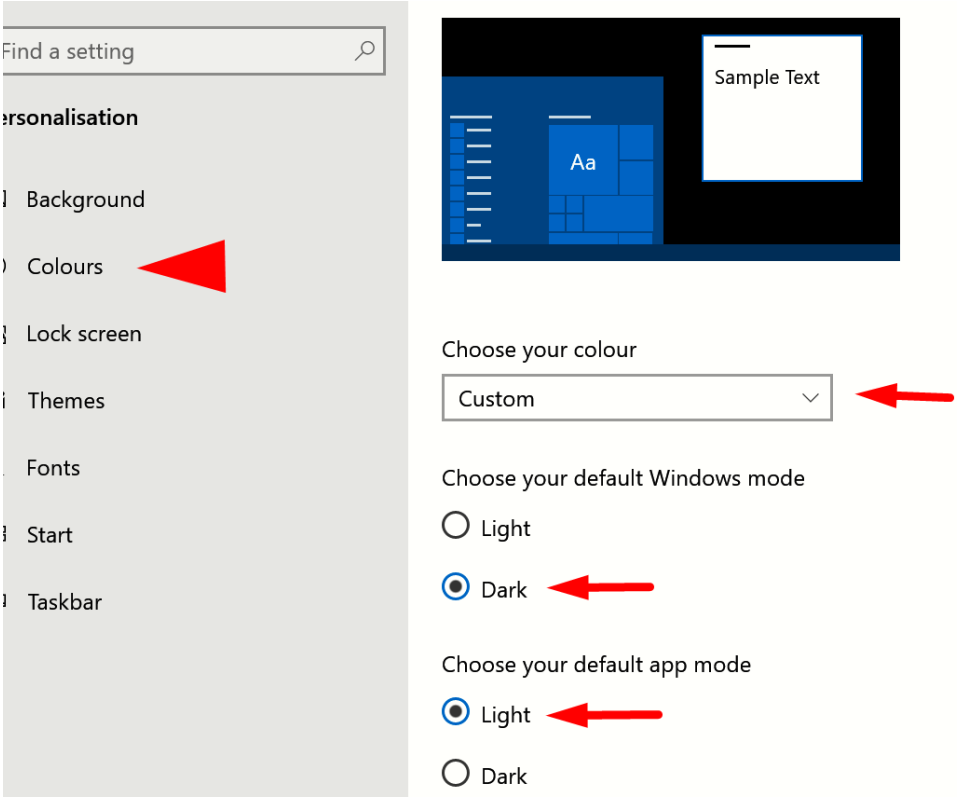
I like a blue taskbar on my computer for the icons standout.

This is how to change it to a colour of your choice.

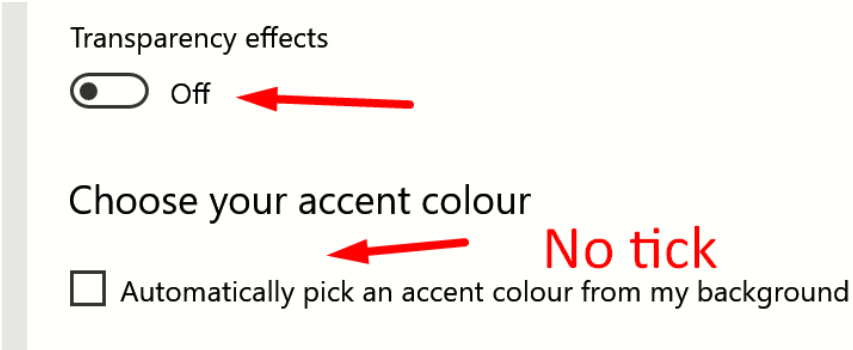
Right click on your **desktop** and **click on "Personalise"** in the list**.**

When the window opens click on **"colours"** in the left hand column**.**

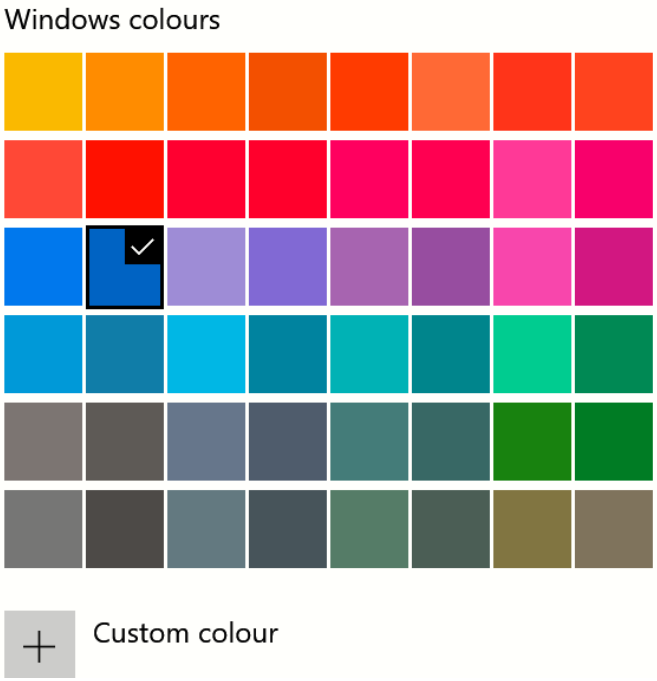
Notice what I have chosen in the picture below.



I always switch off "**transparency**" effects for you get a better focus on text.



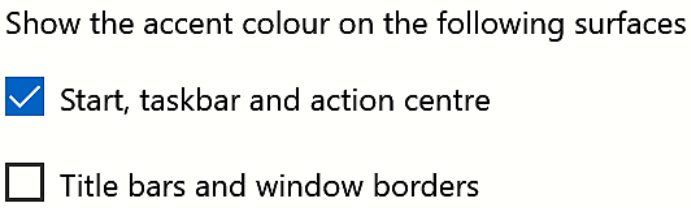
I now choose my accent colour from the list of colour squares



Here is my tick on “Blue”

You can go to a very varied colour scheme by clicking “Custom Colour” but these are enough for me.

Finally put a tick here on “**Start, taskbar and action centre**” and that’s it.



In Windows it is very similar to this. Here is a video.
