Your download history

Have you lost an item you recently downloaded and cannot find it? There is a shortcut where you can see all your recent downloads

You download a photo, a manual, a program installer, or a PDF, and it simply vanishes. You know it's on your computer somewhere, but hunting through folders is a frustrating waste of time.

The "secret" to ending the hunt is a simple two-key shortcut: CTRL + J.

Open your browser (Chrome, Edge, Firefox, or most any other modern browser).

Hold down the CTRL key and tap the J key.

Wham Bam! A dedicated page opens showing every single file you've recently downloaded.

The file you just saved will be right at the top of the list. Just click it, and it will open instantly. The list will show the downloads you have kept and those you have deleted.

CTRL+J It's the fastest way to find your list of downloads.
