Put file extensions on Windows 11

I do not know why but Microsoft always hides file extensions. So you do not know if a file is a jpg, png, gif, docx or even an exe file etc. This is dangerous for you do not know what you are clicking. This is how to show file extensions in Windows 11.

Open the **File Explorer**, Microsoft has it on the Task Bar. Or open it with the keystrokes **"Windows Key + E**"). Click on the "**View**" tab at the top.

Click on the right arrow on "**Show**" in the drop-down menu and **tick** the following;- "**Hidden items**", "**Navigation Pane**", **Item check boxes**, **File name extensions** and **Hidden items**. Close File Explorer.

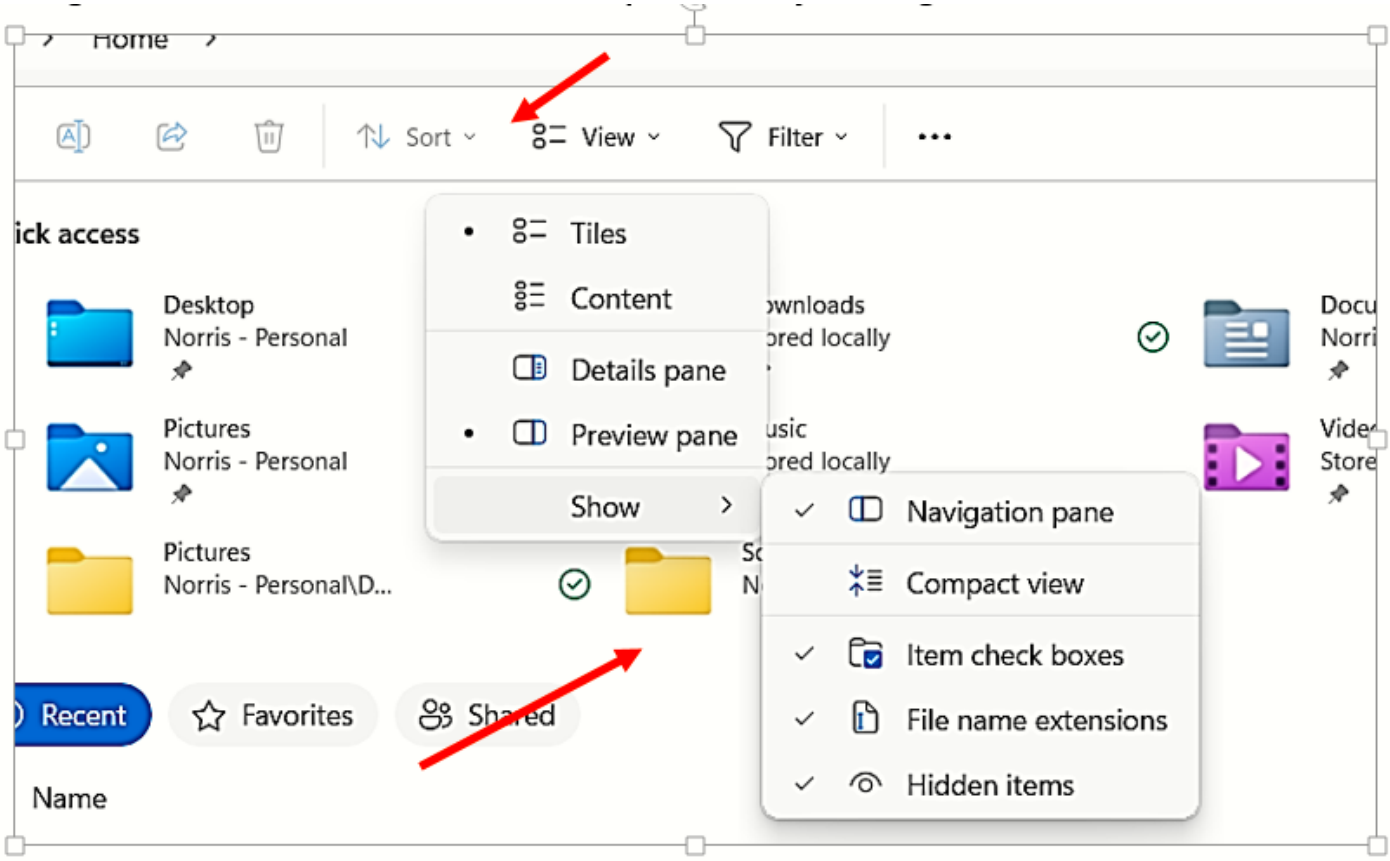
That's it! From now on, you will be able to see all your files, folders, and drives including the ones that Windows was previously hiding.

1.) Open File Explorer (Windows key + E).

2.) Click on the "View" tab at the top.

3.) Tick on "Show" in the drop-down menu.

4.) Ticks on "Hidden items". Item check boxes, file name extensions and navigation pane.

5.) Close File Explorer.


That's it! From now on, you will be able to see all your files, folders, and drives including the ones that Windows was previously hiding.
