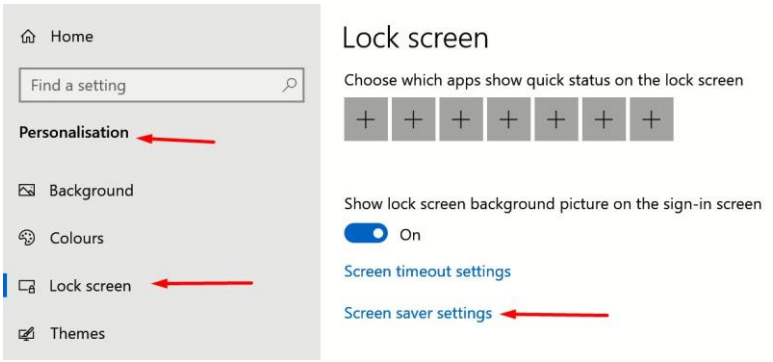
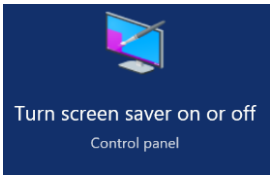
A personal screensaver slideshow

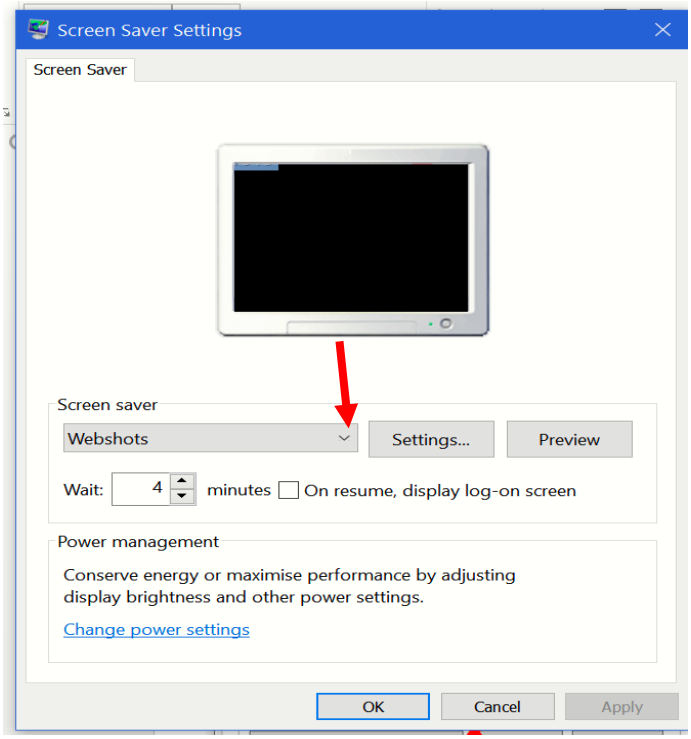
If you leave your computer switched on and don't want to see the same screen you can have changing pictures. You can make a folder for your Pictures & call it "**My Screen Saver**" or whatever your want – as long as you know where it is e.g.in **Pictures**. Then **copy** all of the photos you want to appear in your screensaver to that folder, family, flowers etc. (The "**Copy to / Move** to" tip works great for this or download new images). The pictures should have size of at least 800 x 600 pixels or they will be pixilated on the screen. Once you have all the pictures you want in your screensaver in the folder you created, move on to step 2. One way to access your screensaver app is to **right click** on a space on your desktop and click on "**Personalise**" and when it opens click **Lock screen** and **screen saver settings**.





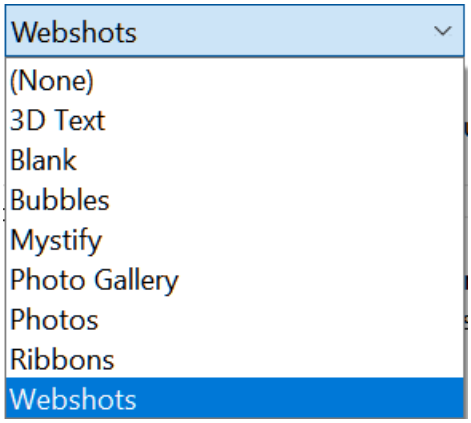
Or Step 1 Type "**Screensaver**" in your search bar &click on "**Turn Screensaver on and off**".

The **screen saver settings window** now comes up.



I have created a folder called "**Webshots**" where I have put pictures. I have chosen a wait time of **4 minutes** to start after not using my computer

If you click on the down arrow to the right you will find that Microsoft provide their own folders of screen savers for you to use. If you choose one of these then this will be your slideshow



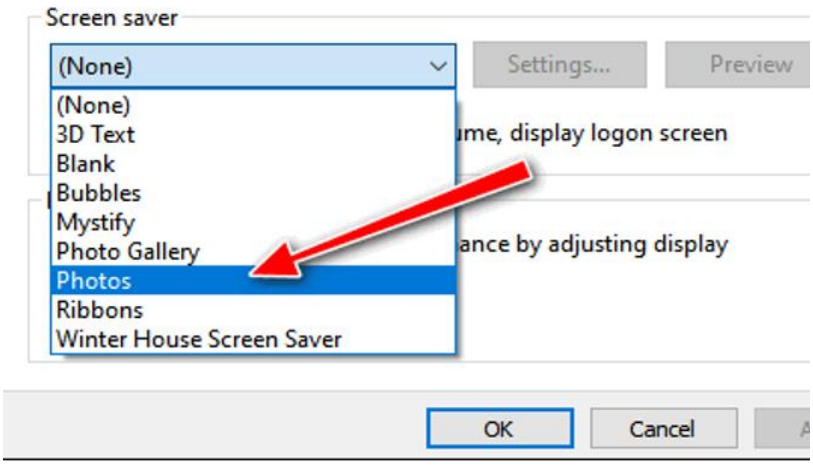
Here is a video- it doesn't mention Timing.

https://www.youtube.com/watch?v=0pxZW7WKWAo&t=6s

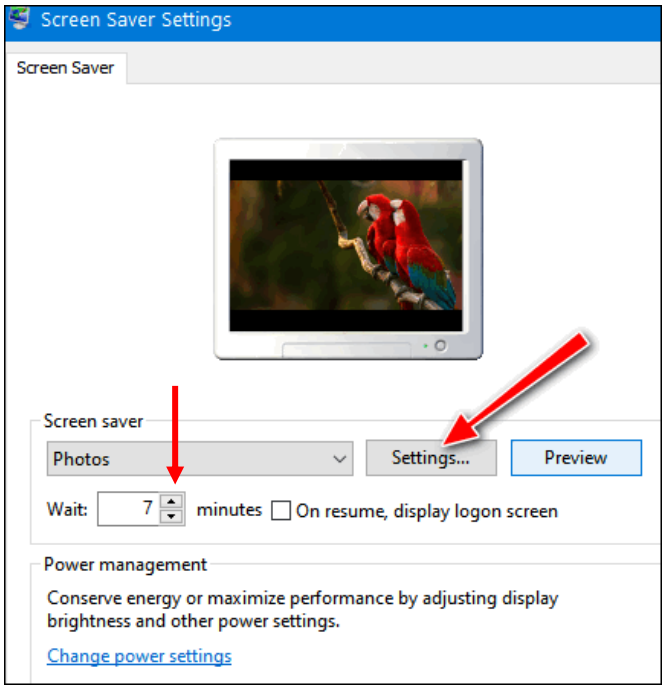
Step 2

However you can choose the folder you made to be your screensaver.

When the Screen Settings tab opens, Choose "**Photos**" from the list.



When you choose "**Photos**" you'll see this dialogue window; click on **settings**:



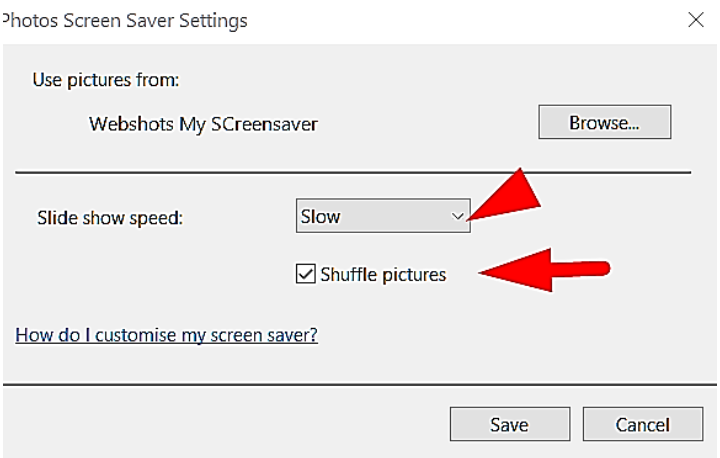
Note;

You can also change the **wait time. It shows 7 minutes here.**

I usually choose 4 minutes by using the up & down arrows.

Now click on "Settings" to browse to your screensaver folder

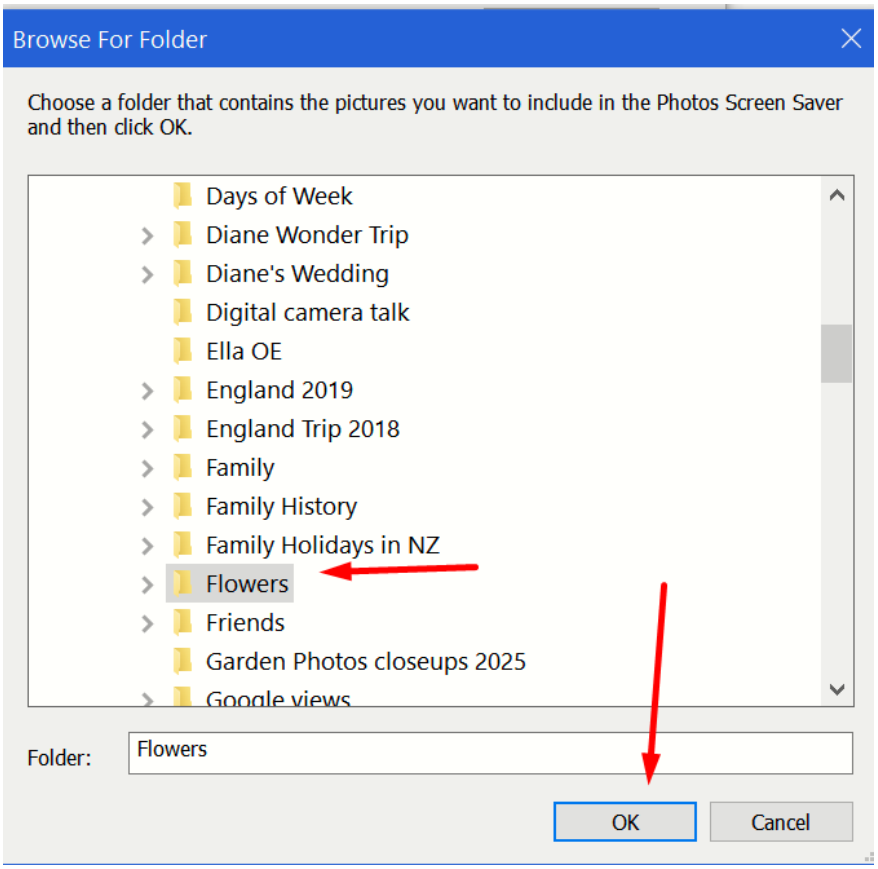
Step 3



Before you click on "Browse" you can modify the slide speed you can shuffle the pictures randomly instead of in order. I usually choose medium.

You can click on **preview** to see the result

When you click on "**Browse**" go to the folder on your computer you want to be your screensaver and **select** it and click **Ok** and **save**.



Here I have decided to choose a folder called "**Flowers**"

Step 4

Now its time to **preview** your screensaver and make sure it looks the way you want it. If the pictures are changing too rapidly or too slowly for you, just click "**Settings**" and go back and change the speed if you wish to. Click on **Preview** to check it is working.

Once everything is the way you want it, click "**Apply" and "OK".**
