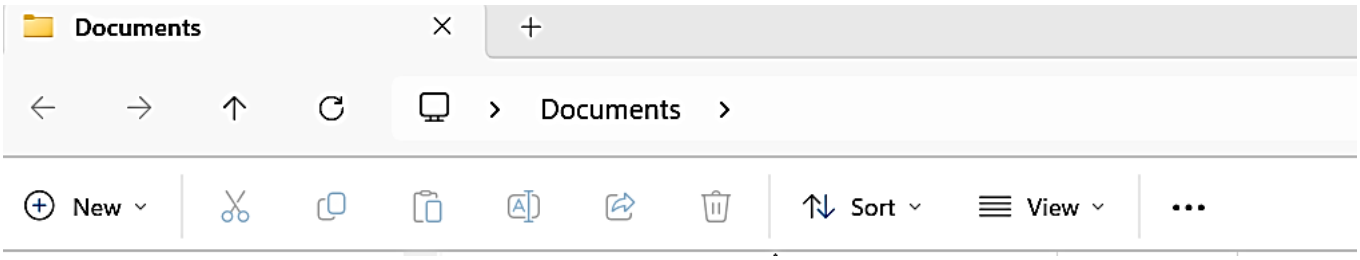
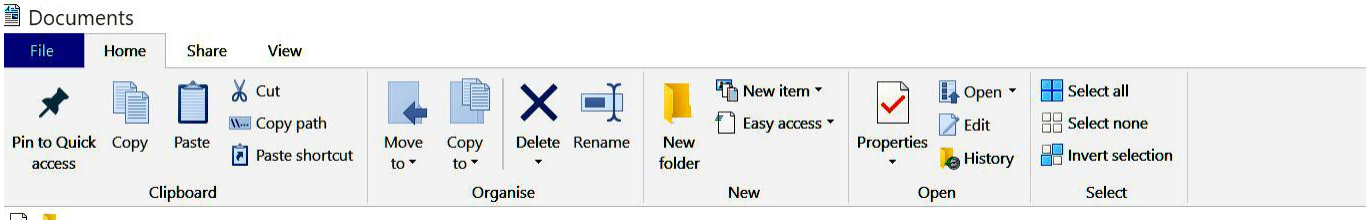
Windows 10 ribbon in windows 11

The Windows 11 ribbon doesn't show as many features as it did in Windows 10.

Windows 11

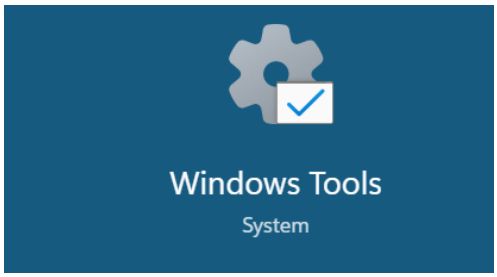


Windows 10

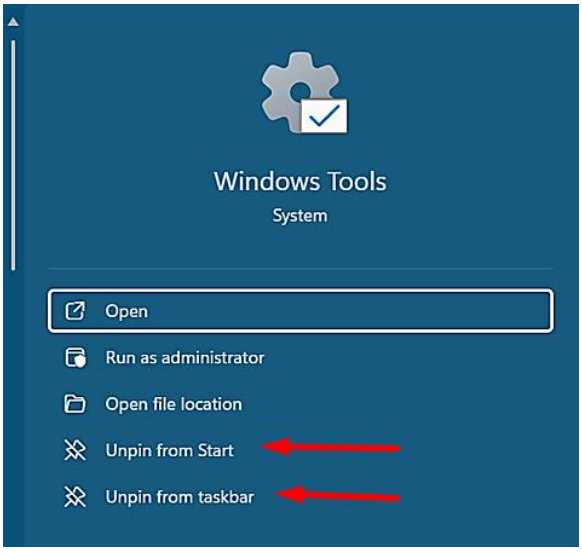


There is a work around to produce a similar one to this in Windows 11.

In your search bar type **"Windows tools"**

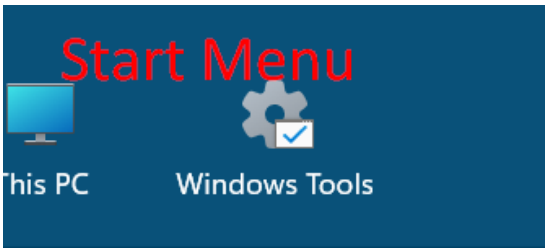


When this appears "**Right Click**" on it.



There will be four options. The bottom two will be **"Pin to Start" and "Pin to taskbar".** Since I have already done this here it says **"Unpin". When you click the then you will have the items in those places.**

The icon on my taskbar

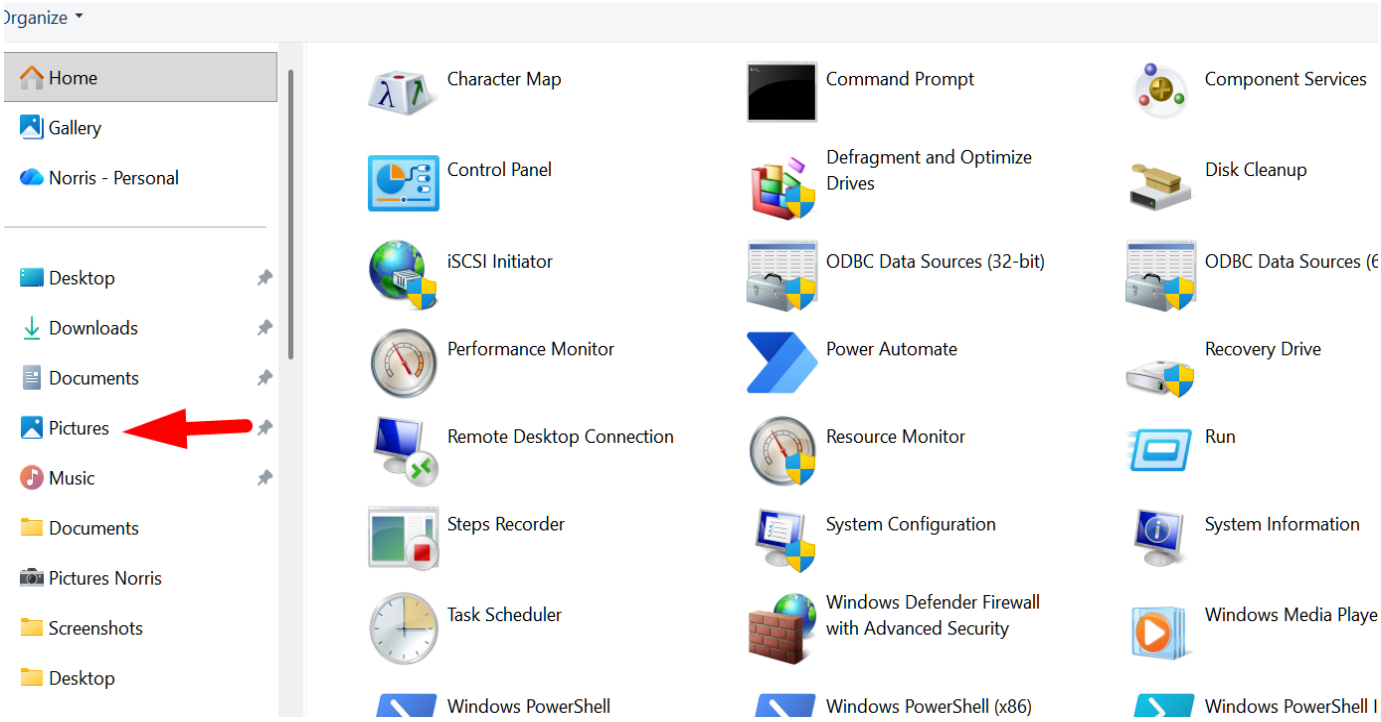


And in my Start Menu

In my Start Menu I will drag the icon to my desktop as a link.

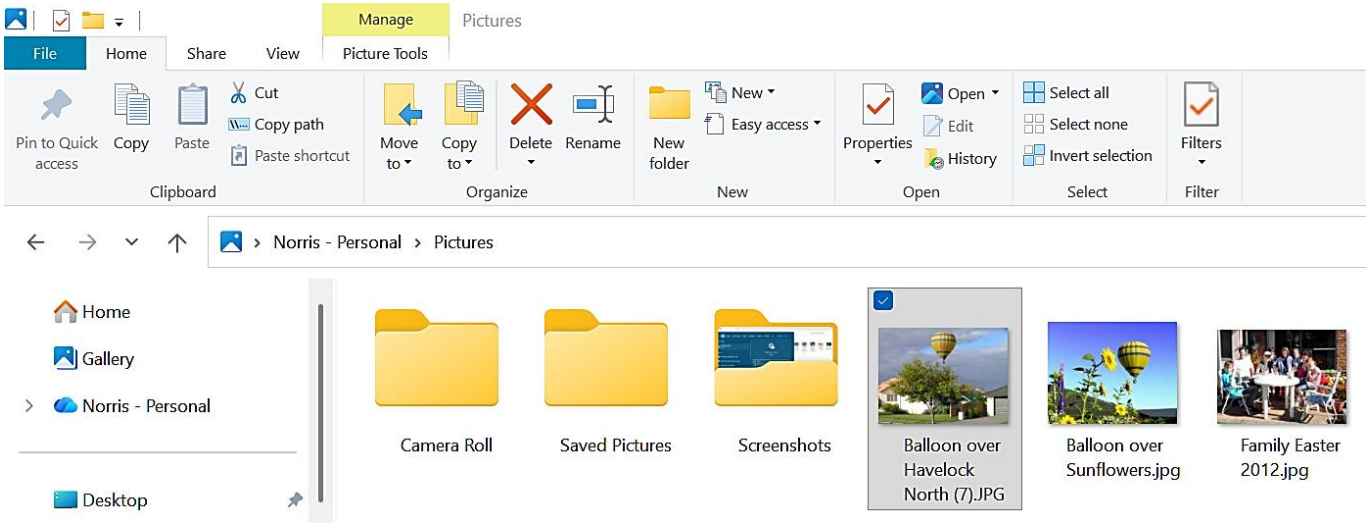
I can drag this Link to anywhere on my desktop. Now I will double click on it to open it.

You will see a whole range of important tools you can use in Windows 11. But in the left hand column click on "**Pictures**"

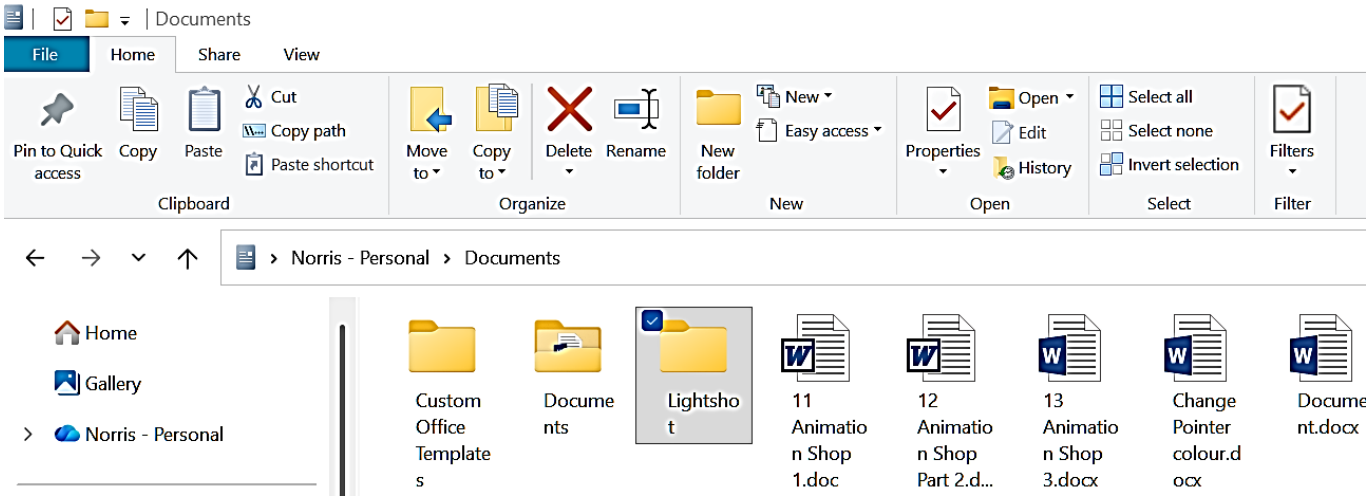


You can also click on "Documents" and others

Now “Pictures” opens with the old Windows 10 Ribbon.



Here is Documents



If you wish you can now rename the “Tools icon” and even put a new picture on it as I have shown in a previous tutorial. Here is mine.
