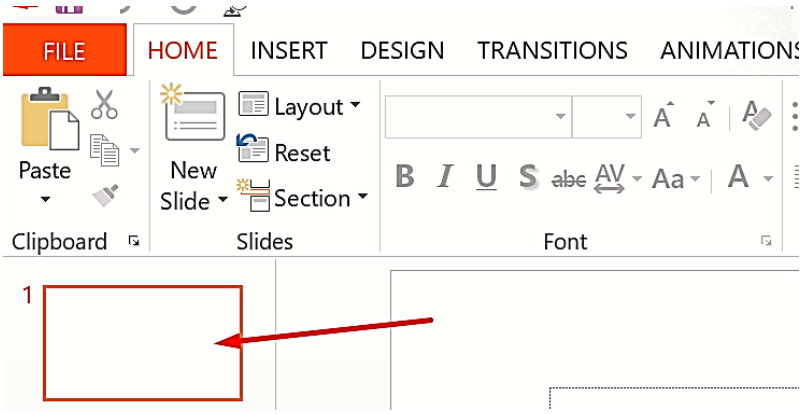
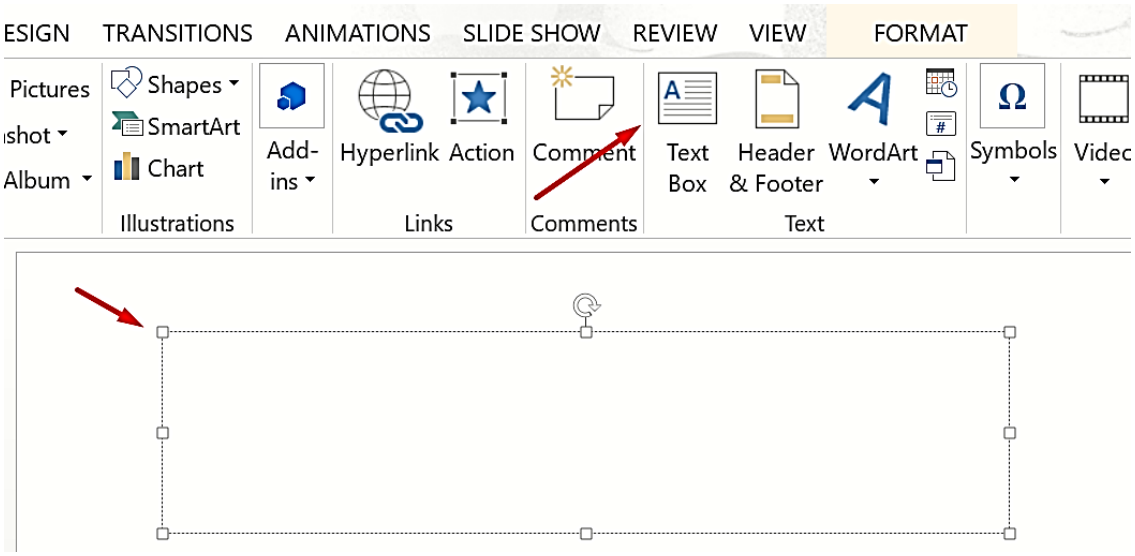
Infilled Pictures in Text using PowerPoint.

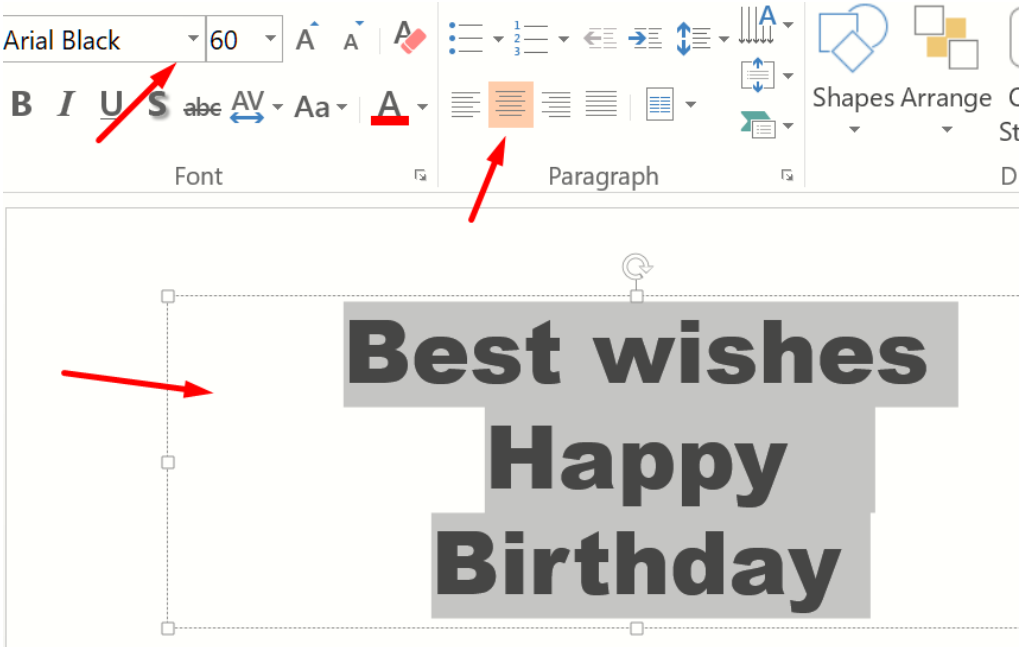
Open PowerPoint and create a plain slide.



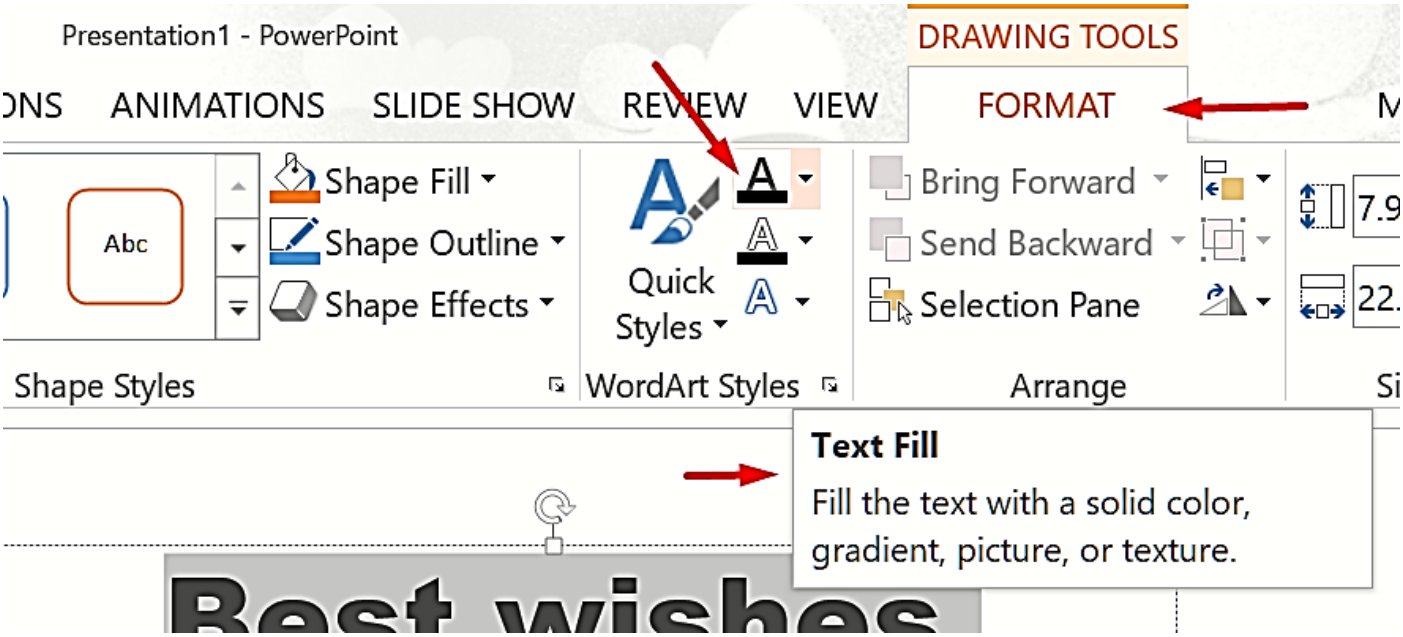
Insert a Text box



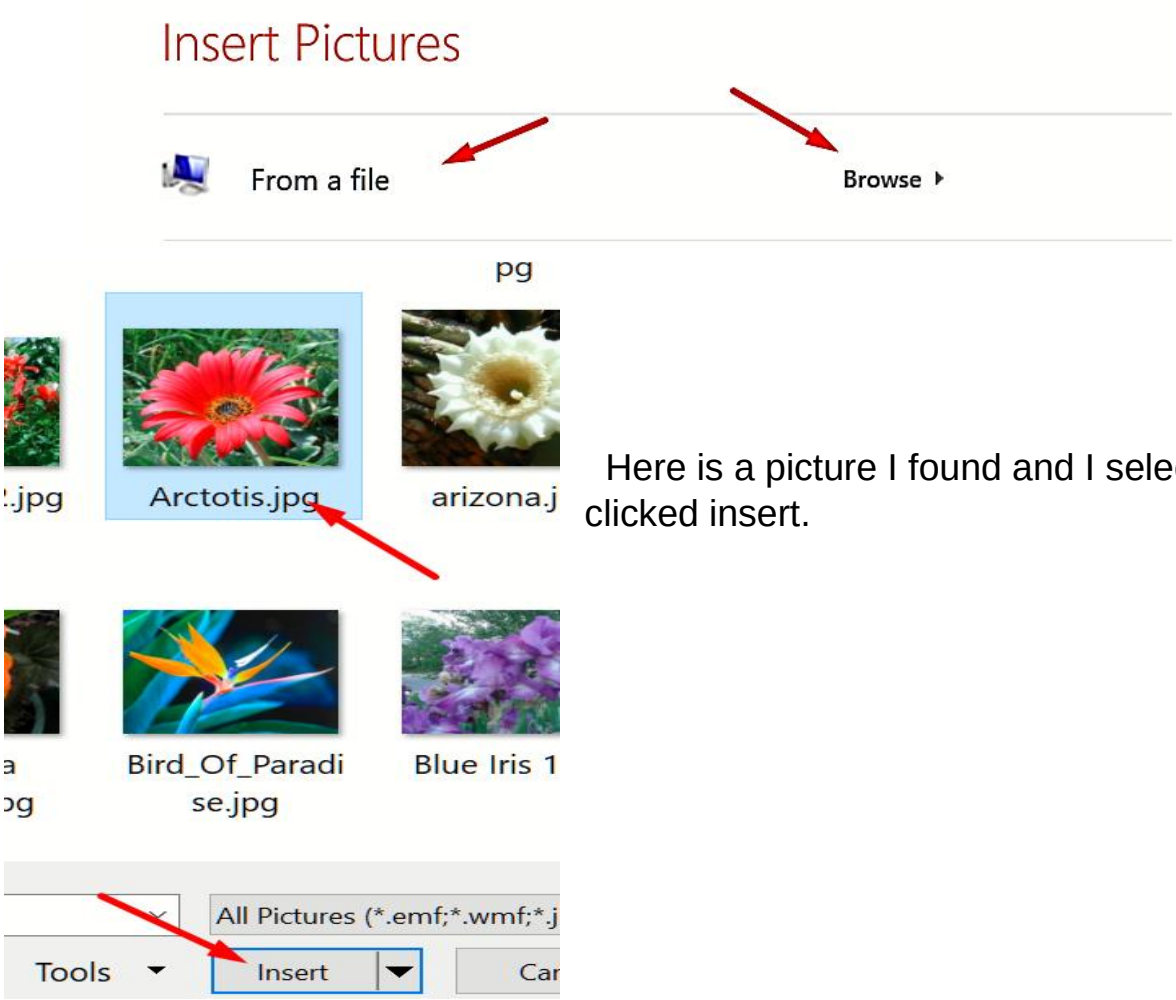
I typed in a message “Best Wishes, Happy Birthday”, changed the font to a wide one such as “Arial Black”. Increased the font size and used the centre tool for the text.



With the resize handles still visible on the text box I went to the Ribbon, clicked on format and the **text fill tool.**



I actually highlighted just the first line of the message before clicking on the drop arrow of the Text Fill tool. In the choices you have when this opens you can choose a colour to put in the text or a picture. I chose picture and went to browse to a picture.

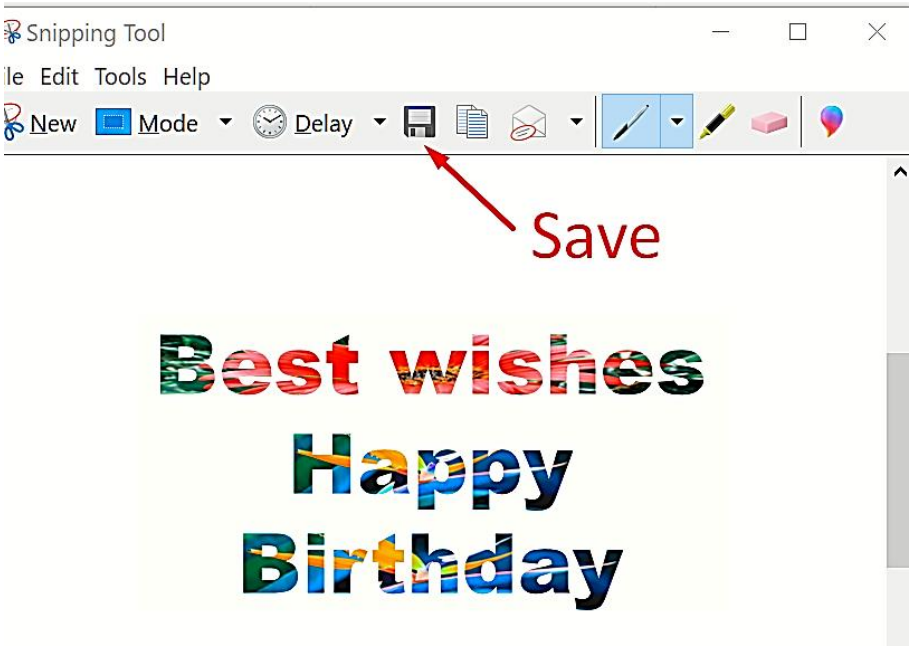


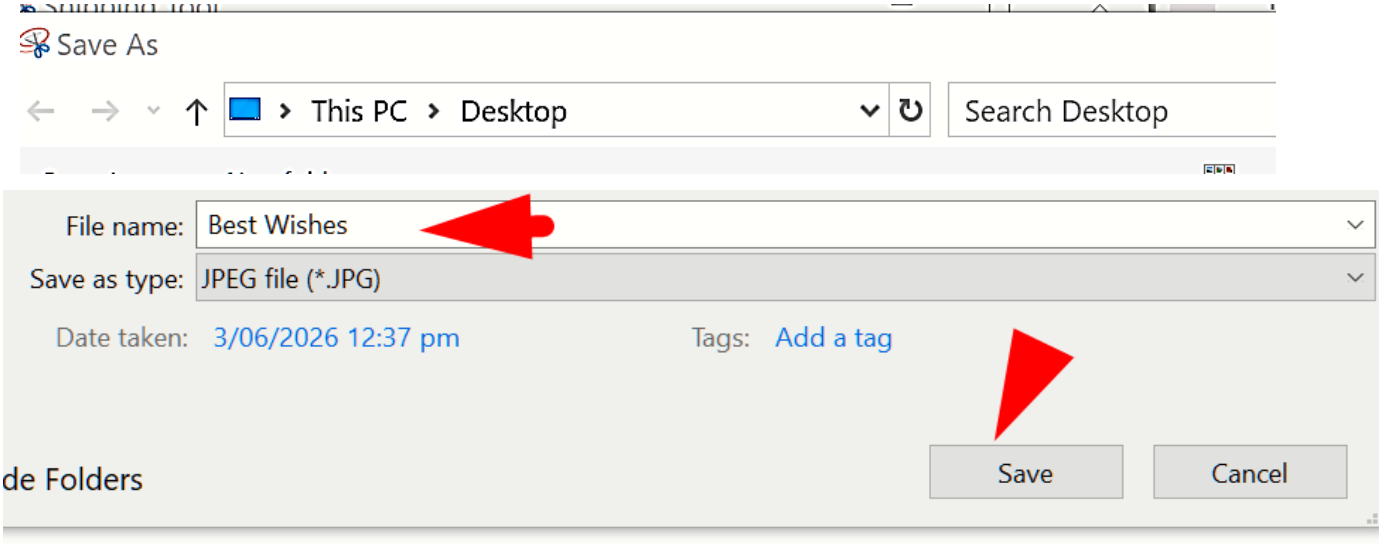
Here is a picture I found and I selected it and clicked insert.

Here is the top line.

Next I highlighted the two other lines and went through the same process to put a different picture in them.

The final thing left is to use the snipping tool to snip out the message and save it as a jpeg on my computer.





Now I can close the Power Point.

I moved the greeting to my Pictures.
